

# What are Genes?

1. How many genes do you have and what molecule are they part of in your cells?

2. How long would DNA be if you could stretch it out? Why isn't it this long in your cells?

3. What spells out the language known as the genetic code?

4. What do genes tell the cell?

5. What do gene regulators do in the cells?

6. What results in different species?
