

Where Do Your Genes Come From?

1. How are the chromosomes inherited from you father similar to the chromosomes inherited from you mother?

2. Which parent determines the sex of a human offspring?

3. During recombination, some of the chromosomes may be changed. What happens is the end result of this process?

4. Which DNA lines could be traced in the male? In the female?

5. What happens to the egg cell, once it is fertilized?
What does it eventually create?
